

IRRI12 C

FUNCTIONS

- 12 watering groups (possibility of 3 watering groups simultaneously)
- Control of a pump relay
- "Pause" input to suspend watering
- Manual and independent control to each valve
- Sequential programming, up to 12 valves at the same time (watering optimisation)
- Filling, Watering and Rinsing steps
- Several starting modes possible per group:
 - At fixed times (10 starts per day)
 - Cyclic
 - By date (start at a given date and time)
 - By outside switch
 - By analogue input
 - By watering flowmeter
 - Safety
 - Manual
- Interaction between watering sequences
- History and statistics of the watering over the last 7 days

Options (upon request):

- 1st extension module - 12 channels, relay output to switch from 12 to 24 channels, supplied in a box with a 24Vac transformer
- Following extension module, 12 channel relay outputs (maximum 48 channels per IRRI12 programmer)
- Control module 8 motors / fertilisation channels
