

FERTI BY-PASS STATION

Regulation

The mixing tank fertilisation station can be controlled by:

- Oscar
- Artic

Description

- Flow rate from 3 to 100m³/h
- Injection line based on a Venturi system
- 2 injection lines in the standard configuration
- Housing available for 2 extra injection lines
- EC / PH regulation
- Possibility of embedding the programmer on the chassis: see photo opposite (programmer not included in the cost of the station)
- Chassis extension available for pre-mixer valve
- Delivered with pump on a chassis: the pump can be supplied by you
- Delivered with a mixer box sized for the chassis pump specifications
- Possibility of mounting a vane volume counter
- Possibility of including a variable speed drive if the difference between the minimum and maximum flow rate is too big
